FROM *a given point* (—), *in a given straight line* (——), *to draw a perpendicular.*

Take any point (—·—) in the given line,

cut off —— = —— (pr. 3.),

construct  (pr. 1.),

draw —— and it shall be perpendicular to the given line.

For —— = —— (const.)

—— = —— (const.)

and —— common to the two triangles.

Therefore  (pr. 8.)

∴ —— ⊥ —— (def. 10.).
